1. Overview

This DOJ Compliance and Security Standard ("Standard") outlines Adobe's internal framework and policy designed to address the U.S. Department of Justice's Final Rule on Preventing Access to U.S. Sensitive Personal Data and Government-Related Data by Countries of Concern or Covered Persons ("DOJ Final Rule"). It outlines the internal processes and procedures intended to manage sensitive U.S. personal and government-related data. Adobe strives to implement robust technical and administrative measures to prevent unauthorized access by Covered Persons and Countries of Concern ("CoC"). This Standard and Policy statement in Section 4, supported by Polices and Standards referenced throughout, describes Adobe's commitment to meet the requirements of the DOJ Final Rule.

2. Scope

This Standard applies to all Adobe Workers seeking to or engaging in potential Restricted Transactions and Adobe business units and functional areas that operate or develop systems that engage in or support activities involving Covered Systems.

3. Responsibility

POCL is responsible for publishing and maintaining this Standard. POCL and teams designated by POCL are responsible for maintaining records that support this Standard. POCL is responsible for maintaining certification processes implemented to support this Standard.

4. Policy

All Adobe Workers must follow this Policy, that provides a structured and auditable framework regarding potential Restricted Transactions. This framework governs the handling of bulk US sensitive personal and government-related data in the context of such potential transactions. It helps ensure that all qualifying data transfers and access subject to the DOJ Final Rule are lawful, secure, and transparent, and that robust technical and administrative safeguards are implemented and maintained. The following principles reflect Adobe's commitment to data protection, accountability, and continuous compliance:

4.1 Lawful Data Transfer & Access Controls

Adobe does not permit Restricted Transactions (subject to an exception) or Prohibited Transactions. Adobe also seeks to prevent potential future Prohibited Transactions and Restricted Transactions by establishing processes and controls across all systems that monitor, detect and prevent such transactions. Below is a summary of the controls put in place for potential Restricted Transactions that are designed to prevent unauthorized access to Covered Data by Covered Persons or CoC and help ensure compliance with the DOJ Final Rule:

- Adobe identifies the types and volumes of Covered Data involved in Restricted Transactions

- Adobe determines the identity of Covered Data recipients, including ownership of entities and citizenship or primary residence of individuals to the extent feasible and in compliance with law. Adobe identifies the purpose and end-use of the Covered Data in Restricted Transactions.
- Adobe has restrictions on access to systems containing sensitive U.S. personal and government-related data for Adobe Workers who reside in CoC and or require travel to CoC.
- Adobe has the following internal process to address requests for exceptions to the prohibition on Restricted Transactions. A request for an exception must be submitted on the HRJ US Sensitive Data Access Exception Request Form and be reviewed by the High-Risk Jurisdiction (HRJ) Committee.
    - The HRJ Committee approval will be conditioned upon confirmation by the requester that the security controls referenced in Section 4.2 (or alternative compensating controls) have been or will be met for the applicable Covered Systems in advance of any Restricted Transaction occurring.
- Adobe implements a review cycle to assess Covered Systems and develop preventative controls designed to avoid Restricted Transactions, unless approved through the exception process.

4.2 Security Controls Supporting DOJ Final Rule Compliance

This Policy integrates and cross-references existing internal security Policies and Standards and describes the security controls that are in place to help prevent unauthorized access to covered data by Covered Persons or CoC. As referenced above in Section 4.1, Restricted Transactions with Covered Persons or CoC are only permitted by exception granted by the HRJ Committee. Such exception approval shall be contingent upon the Restricted Transaction and applicable elements of the associated Covered Systems meeting the below or equivalent security requirements, which are consistent with the Department of Homeland Security's Cybersecurity and Infrastructure Agency's (CISA's) Security Requirements for Restricted Transactions. Prior to conducting a Restricted Transaction, the person or team requesting an exception to permit a Restricted Transaction is responsible for obtaining confirmation from all necessary stakeholders (e.g., Adobe Workers or teams responsible for operating the Covered System and/or applicable members of Adobe Technology Systems) that each of the following security requirements have been met with respect to the Covered Systems associated with the requester's proposed Restricted Transaction.

A summary of Adobe's applicable Security commitments is detailed in the chart below:

Security Requirements & Pre-existing Applicable Internal Policies and Standards	**Additional Requirements for Covered Systems**
Organizational- and System-Level Requirements	
Asset Inventory – all assets of the Covered System must be identified, prioritized, and documented in a manner that includes each system's respective internet protocol (IP) address (including IPv6). This asset inventory must be updated on a recurring basis, and no less than monthly for any applicable Information Technology (IT) assets. Applicable Policies/Standards: • Information Systems Asset Management Policy • Information Systems Asset Inventory Standard	All assets of a Covered System must be identified as such within the applicable System(s) of Record (either the Fixed Asset Registry or an appropriate Configuration Management Database) where such assets have been documented by the Adobe Workers or teams responsible for operating the Covered System pursuant to the Information Systems Asset Inventory Standard. For assets of Covered Systems, the inventory must record, to the extent practicable, the applicable IP address (including IPv6) and such inventory must be updated on a recurring basis, but no less than monthly for IT assets.
Designated Responsible Leader – Adobe must designate, at an organizational-level, a leader who is responsible and accountable for each or both of the following areas: (1) cybersecurity and (2) governance, risk, and compliance functions. Applicable Policies/Standards: • Information Security Policy • Security Risk Management Standard	N/A

Security Requirements & Pre-existing Applicable Internal Policies and Standards	**Additional Requirements for Covered Systems**
Known Exploited Vulnerabilities (KEVs) – vulnerabilities appearing on CISA's Known Exploited Vulnerabilities Catalog must be remediated in any internet-facing elements of the Covered System by either patching or implementing other compensating controls within 45 calendar days. Applicable Policies/Standards: • Vulnerability Management Standard	KEVs impacting internet-facing assets of a Covered System must be classified as and remediated within the applicable SLAs for a Blocker or Critical severity level vulnerability or otherwise remediated within 45 calendar days of the vulnerability's publication on the KEV Catalog, as appropriate based upon the risk presented by the vulnerability, as determined by Adobe's Security Office.
Vendor/Supplier Management – vendors and suppliers supporting a Covered System must be appropriately assessed and managed, including through documentation and management of contractual obligations such as IT and cybersecurity requirements. Applicable Policies/Standards: • Vendor Risk Management Policy (to be replaced with forthcoming Third Party Risk Management Policy expected by end of FY25) • Global Procurement Policy	Vendors and suppliers with access to Covered Systems must include appropriate contractual provisions detailing the third party's obligations to support Adobe's DOJ Final Rule Compliance requirements, as such template has been approved by POCL.
Network Topology of Covered Systems – an accurate network topology must be developed and maintained for Covered Systems and, to the extent technically feasible, any network interfacing with a Covered System.	Upon identification of Covered Systems, an accurate network topology must be developed and maintained for those Covered Systems including, to the extent technically feasible, any networks that interface with those systems.
Administrative Approval for Hardware or Software Deployments to Covered Systems – all hardware and software to be added to a Covered System must be approved by an appropriate administrator prior to deployment. Applicable Policies/Standards: • Information Systems Asset Management Policy • Software Management Standard • Information Systems Asset Inventory Standard • Employee-Assigned Asset Standard	In addition to software deployment only being permissible through the authorized Software and Apps catalog, or through the Non-Standard Software request form, as outlined in the Software Management Standard, all hardware to be deployed to a Covered System must likewise be approved by an appropriate Adobe administrator.
Incident Response Plan – Adobe must maintain an Incident Response Plan that is applicable to Covered Systems, reviewed annually, and updated as needed. Applicable Policies/Standards: • Information Security Incident Response Standard • Incident Response Plan (available on a need-to-know basis for personnel actively involved in incident management)	N/A
Strong Authentication Measures – multifactor authentication (MFA) must be enforced on all Covered Systems or, where not technically feasible or enforceable, password-based authentication must be implemented with passwords required to have sufficient strength, including minimum length requirements of 15 or more characters. Applicable Policies/Standards: • Authentication Standard	N/A

Security Requirements & Pre-existing Applicable Internal Policies and Standards	Additional Requirements for Covered Systems
Revoking Credentials – individual or shared credentials or authorize access must be promptly revoked on a risk-informed timeframe from any individual with access to Covered Systems following that individual's termination or change in roles (where their new role no longer requires such access). Applicable Policies/Standards: • Logical Access Account Standard	N/A
Access and Security Event Logs – logs pertaining to access- and security-focused events must be collected and stored for Covered Systems. Logs must be securely stored in a central system for a minimum of 12 months or until final resolution by the US Government of an investigation into a data breach or violation of these security requirements, whichever is longer. Logs may only be accessed or modified by authorized and authenticated users, and a process must be implemented to notify cybersecurity personnel when a critical log source is not producing and maintaining logs as expected. Applicable Policies/Standards: • Infrastructure Logging Standard • Security Monitoring Standard	In addition to the log collection, maintenance, and retention guidelines detailed in the Infrastructure Logging Standard and Security Monitoring Standard, access- and security-focused event logs for a Covered System must be maintained until final resolution of any investigation by the US government stemming from a data breach or violation of these security requirements.
Deny Access by Default – all connections to Covered Systems and networks upon which Covered Systems reside must be denied by default unless those connections are specifically authorized for system functionality. Applicable Policies/Standards: • Network Security Standard	N/A
Organizational Access Management System – organizational-level identities and credentials must be issued and managed for authorized users, services, and hardware, with sufficient attributes to prevent access to Covered Systems by Covered Persons or Countries of Concern. Applicable Policies/Standards: • Authentication Standard • Logical Access Account Standard	N/A
Annual Risk Assessment – an internal data security risk assessment must be conducted against Covered Systems to determine whether the approach taken with respect to the Data-Level Requirements below are sufficient to prevent unauthorized access to Covered Data by Covered Persons or Countries of Concern, taking into account likelihood of disclosure and of harm based on the nature of the transaction and data at issue. This risk assessment must be evaluated annually by Adobe and updated, as appropriate. Applicable Policies/Standards:	Upon identification of a Covered System, the Security Risk Management Team should include evaluation of risks to that system with respect to potential for access by Covered Persons of Countries of Concern as part of its annual security risk assessment pursuant to the Security Risk Management Standard, Section 3.2.7.

Security Requirements & Pre-existing Applicable Internal Policies and Standards	Additional Requirements for Covered Systems
• Security Risk Management Standard	
Data-Level Requirements For any Restricted Transaction, a combination of the following mitigations must be implemented such that, when taken together, the mitigations are sufficient to fully and effectively prevent access to Covered Data within Covered Systems by Countries of Concern or Covered Persons.	
Data Minimization and Data Masking – data minimization and data masking strategies should be implemented to reduce the need to collect or sufficiently obfuscate Covered Data. Strategies may include maintaining an appropriate and annually reviewed data retention and deletion policy and processing Covered Data in aggregated, pseudonymized, de-identified, or anonymized form. Applicable Policies/Standards: • Employee and Applicant Personal Information Retention and Deletion Standard • Customer Personal Information Retention and Deletion Policy • Personal Information Retention and Deletion Policy • Data Classification & Handling Standard • Cryptography Standard	Covered Data subject to a Restricted Transaction should be managed consisted with these policies and standards, and should be processed, to the extent practicable, with data minimization and data masking best practices implemented.
Encrypt Covered Data – Covered Data should be adequately encrypted during a Restricted Transaction. This encryption should be applied both in transit and at rest, and the cryptographic keys used to encrypt Covered Data must be securely generated and managed. Applicable Policies/Standards: • Data Classification and Handling Standard • Key Management Standard • Cryptography Standard	All Covered Data involved in a Restricted Transaction should be encrypted at a level consistent with Restricted Data, as detailed in the Data Classification and Handling Standard.
Privacy Enhancing Technologies and Techniques – Privacy enhancing technologies and techniques should be applied to Covered Data processed pursuant to a Restricted Transaction. Applicable Policies/Standards: • Personal Information Protection Policy • Data Classification and Handling Standard	The processing of Covered Data in the context of a Restricted Transaction must be conducted in a privacy-protective manner that has been evaluated and approved by POCL, usually via a Privacy Impact Assessment.
Deny Access to Covered Data by Covered Persons and Countries of Concern – identity and access management techniques and processes should be configured to deny authorized access to Covered Data by Covered Persons or Countries of Concern. Applicable Policies/Standards: • High Risk Jurisdiction Standard • Authentication Standard • Logical Access Account Standard	N/A

4.3 Reporting Known or Suspected Prohibited Transactions

All Adobe Workers are required to promptly report any known or suspected instances where an entity incorporated outside of the U.S., or a non-U.S. citizen, national, or resident (collectively, "Non-U.S. Person") engages in a subsequent or onward sale, license, or similar commercial transaction to a Covered Person or Country of Concern involving Covered Data which the Non-U.S. Person has been granted access to by Adobe (such onward transfer of Covered Data constitutes a "Prohibited Transaction").

The report should be made to AskPrivacy@adobe.com within one (1) business day of the Worker becoming aware of the known or suspected Prohibited Transaction and should include as many of the following details as are then-known to the Worker:

1. Date(s) the known or suspected Prohibited Transaction occurred,
2. Description of the initial sale, license, or similar commercial transaction involving the Covered Data between Adobe and the Non-U.S. Person,
3. Any contractual documentation between Adobe and the Non-U.S. Person which detail the Non-U.S. Person's usage and onward transfer limitations with respect to the Covered Data, and
4. Information, including name and location, of known or suspected persons involved in the onward transfer transaction.

4.4 Training & Awareness

All Adobe Workers are required to complete Privacy and Security training that is periodically updated to include any associated security and compliance requirements. These trainings are:

- Applicable to all relevant Adobe Workers
- Focused on core competencies and awareness of security implications
- Measured through assessments as appropriate

5. Procedure, Approval & Oversight

All Data Compliance and Security Standard and Policy requirements are subject to approval by the Chief Cyber Legal and Privacy Officer ("CCPO"). The POCL team is responsible for the development, publication, maintenance, and enforcement of these Standard and Policy requirements.

The CCPO will provide any relevant DOJ Data Compliance and Security updates to senior management and the Audit Committee of the Board during Audit Committee sessions.

This Standard and Policy requirements are reviewed annually and updated as needed to reflect changes in law, risk, or business operations.

6. Definitions

Adobe Worker	The term "Adobe Worker" and "Worker" include current and former regular employees, applicants, Adobe-paid temporary employees, Contingent Workers and interns.
Asset Custodian	The term Asset Custodian means a person or group responsible for the management, operation, and security of an asset.
Bulk U.S. Sensitive Personal Data	A collection or set of sensitive personal data relating to U.S. persons, in any format, regardless of whether the data is anonymized, pseudonymized, de-identified, or encrypted, where such data meets or exceeds the applicable threshold set forth in § 202.205. § 202.206.
Contingent Worker	The term "Contingent Worker" refers to temporary workers, independent contractors, and vendor workers.
Consumer	Adobe's individual customers, Adobe's Teams customers, website visitors, attendees to Adobe's events, and visitors to Adobe's physical locations.
Covered Data	Covered Data means any government-related data or bulk U.S. sensitive personal data as defined by the DOJ Rule.

Covered Data Transaction	A covered data transaction is any transaction that involves any access by a Country of Concern or Covered Person to any government-related data or bulk U.S. sensitive personal data and that involves: 1) Data brokerage; 2) A vendor agreement; 3) An employment agreement; or ~~4)~~ An investment agreement.
Covered Person	The term covered person means: 1) A foreign person that is an entity that is 50% or more owned, directly or indirectly, individually or in the aggregate, by one or more countries of concern or persons described in paragraph (2) below; or that is organized or chartered under the laws of, or has its principal place of business in, a Country of Concern; 2) A foreign person that is an entity that is 50% or more owned, directly or indirectly, individually or in the aggregate, by one or more persons described in paragraphs (1), (3), (4), or (5) of this section; 3) A foreign person that is an individual who is an employee or contractor of a Country of Concern or of an entity described in paragraphs (1), (2), or (5) of this section; 4) A foreign person that is an individual who is primarily a resident in the territorial jurisdiction of a Country of Concern; or 5) Any person, wherever located, determined by the U.S. Attorney General: i. To be, to have been, or to be likely to become owned or controlled by or subject to the jurisdiction or direction of a Country of Concern or Covered Person; ii. To act, to have acted or purported to act, or to be likely to act for or on behalf of a Country of Concern or Covered Person; or iii. To have knowingly caused or directed, or to be likely to knowingly cause or direct a violation of this part.
Covered System	The term Covered System: • Means an information system used to obtain, read, copy, decrypt, edit, divert, release, affect, alter the state of, view, receive, collect, process, maintain, use, share, disseminate, or dispose of (collectively, "interact with") Covered Data as part of a Restricted Transaction, regardless of whether the data is encrypted, anonymized, pseudonymized, or de-identified; and • Does not include an information system (e.g., an end user workstation) that has the ability to view or read sensitive personal data (other than sensitive personal data that constitutes government-related data) but does not ordinarily interact with such data in bulk form.
Country of Concern	For purposes of this Standard the term country of concern means: China (including Hong Kong and Macau), Cuba, Iran, North Korea, Russia, and Venezuela.
Customer	Adobe's enterprise, business, education, and government customers.
Prohibited Transaction	The term prohibited transaction means any Covered Data transaction that involve U.S. persons knowingly engaging in any of the following: 1) Data Brokerage with Countries of Concern or Covered Persons –Data brokerage with a Country of Concern or Covered Person; 2) Onward Transfer Violations – Data brokerage with a foreign person (that is not a Covered Person) unless the U.S. person (1) contractually requires that the foreign person refrain from onward sale with a Country of Concern or Covered Person, and (2) reports any known or suspected violations of this contractual requirement; 3) Human 'omic and Biospecimen Transfers – Access by a Country of Concern or Covered Person to bulk human 'omic data, or to human biospecimens from which bulk human 'omic data could be derived; 4) Evasion or Structuring to Circumvent Prohibitions – Transactions intentionally structured to evade, avoid, or otherwise violate the DOJ Rule's restrictions (as well as any related attempts or conspiracy to violate those restrictions); and

	5) Direction of Prohibited Transactions – Directing any Covered Data transaction that constitutes a Prohibited Transaction or unauthorized Restricted Transaction under the DOJ Rule.
Restricted Transaction	The term restricted transaction means any Covered Data transaction involving a vendor agreement, employment agreement, or investment agreement with a Country of Concern or Covered Person.
Sensitive U.S. personal data	Sensitive U.S. personal data means the following types of personal data when it relates to U.S. citizens, nationals, residents, refugees or asylees, or people physically present in the U.S.: 1) Covered personal identifiers, including any piece of data in any of the following data fields: a. Full or truncated government identification or account number (such as a Social Security number, driver's license or State identification number, passport number, or Alien Registration Number); b. Full financial account numbers or personal identification numbers associated with a financial institution or financial services company; c. Device-based or hardware-based identifier (such as International Mobile Equipment Identity ("IMEI"), Media Access Control ("MAC") address, or Subscriber Identity Module ("SIM") card number); d. Demographic or contact data (such as first and last name, birth date, birthplace, ZIP code, residential street or postal address, phone number, email address, or similar public account identifiers); e. Advertising identifier (such as Google Advertising ID, Apple ID for Advertisers, or other mobile advertising ID ("MAID")); f. Account-authentication data (such as account username, account password, or an answer to security questions); g. Network-based identifier (such as Internet Protocol ("IP") address or cookie data); or h. Call-detail data (such as Customer Proprietary Network Information ("CPNI")); 2) Precise geolocation data, whether real-time or historical, that identifies the physical location of an individual or a device with a precision of within 1,000 meters. 3) Biometric identifiers, such as measurable physical characteristics or behaviors used to recognize or verify the identity of an individual, including facial images, voice prints and patterns, retina and iris scans, palm prints and fingerprints, gait, and keyboard usage patterns that are enrolled in a biometric system and the templates created by the system; Human 'omic data, such as human genomic data, human epigenomic data, human proteomic data, or human transcriptomic data; 4) Personal health data, such as health information that indicates, reveals, or describes the past, present, or future physical or mental health or condition of an individual; the provision of healthcare to an individual; or the past, present, or future payment for the provision of healthcare to an individual. This term includes basic physical measurements and health attributes (such as bodily functions, height and weight, vital signs, symptoms, and allergies); social, psychological, behavioral, and medical diagnostic, intervention, and treatment history; test results; logs of exercise habits; immunization data; data on reproductive and sexual health; and data on the use or purchase of prescribed medications; Personal financial data, such as data about an individual's credit, charge, or debit card, or bank account, including purchases and payment history; data in a bank, credit, or other financial statement, including assets, liabilities, debts, or trades in a securities portfolio; or data in a credit report or in a "consumer report"; and 5) Combinations of the above.

7. Related Policies and Standards

This Standard is governed by the Personal Information Protection and the Information Security Policies. Below are related policies and standards.

- Adobe Worker Personal Information Collection and Usage Standard – Describes the requirements for collecting and using Personal Information related to Adobe Workers.

- Applicant Personal Information Handling Standard – Describes Adobe's privacy and data protection practices that should be followed when the Talent organization collects, uses, and stores the Personal Information of applicants for recruitment purposes.
- Authentication Standard – Outlines the authentication required for personnel access to corporate assets, such as password management and strong authenticators.
- Cryptography Standard – Defines the minimum requirements for cryptography to help protect the confidentiality and integrity of Adobe data.
- Customer Personal Information Retention and Deletion Standard – Establishes Adobe's retention and deletion practices for Personal Information for all our customers, except where a customer has negotiated an explicit deletion schedule into their contract.
- Data Classification and Handling Standard – Establishes that all data collected, processed, transmitted, stored, or destroyed by or on behalf of Adobe must be classified and then protected in accordance with its designated classification.
- Data Transfer Compliance Standard – Describes what Adobe is required to do in order to demonstrate compliance with the EU-U.S. Data Privacy Principles.
- Employee and Applicant Personal Information Retention and Deletion Standard – Establishes Adobe's retention and deletion practices for employee and applicant personal information. It applies to employee and applicant personal information that is stored in defined HR Management IT systems.
- Employee-Assigned Asset Standard – Outlines the responsibilities of Adobe employees for the maintenance and security of Adobe-owned hardware to employees. This Standard also requires that Adobe devices in use must be enrolled in the Device Management Service with the current EDR installed, and when an employee has finished using Adobe hardware, or has exited Adobe, the asset must be returned to Adobe IT.
- Global Procurement Policy – Adobe's Global Procurement Policy outlines the procedures and requirements for sourcing goods and services.
- High Risk Jurisdiction Standard – Outlines the strategic requirements to secure and protect Adobe data, systems, and products, by restricting certain access in jurisdictions listed in the Standard and maintained on the High-Risk Jurisdiction wiki.
- Information Security Incident Response Standard – Provides direction to Adobe personnel on their responsibility to report suspected or actual security and privacy incidents and outlines incident response team responsibilities.
- Information Security Policy - Outlines the strategic objectives, requirements, and goals to secure data, systems, networks and products under Adobe's control.
- Information Systems Asset Inventory Standard – Identifies the requirements for maintaining accurate inventory records of Adobe information systems assets.
- Information Systems Asset Management Policy – Outlines the high-level objectives for the management of information systems assets.
- Infrastructure Logging Standard – Defines the requirements for logging within Adobe infrastructure to ensure that information security policies, standards, procedures, and controls are being followed and are effective. Event collection is critical to meeting Adobe's operational and compliance requirements, including understanding the nature of security incidents, access to systems and assets, and evaluating performance of Adobe's products and services. It is also used for establishing baselines, identifying operational trends, and supporting Adobe's internal investigations, including audit and forensic analysis.
- Key Management Standard – Defines Adobe's required processes for protecting logical access keys from disclosure and misuse. The purpose of this Standard is to communicate requirements in securing logical access keys and to restrict certain functions such as key generation, key distribution, and key storage to authorized personnel only. The Standard elaborates over all necessary aspects of key management.
- Logical Access Account Standard – Describes the requirements and methodologies so that Adobe data is accessed only by authorized personnel.
- Network Security Standard – Describes required control points between networks that fall under different administrative ownership, such as Adobe Business Units and trusted third parties, and also describes the requirements for network segmentation, firewalls, proxies, and devices with similar functionality on Adobe owned or managed networks.
- Personal Information Protection Policy – Describes the foundational privacy principles that guide how Adobe lawfully collects, uses, shares, and secures Personal Information.
- Personal Information Retention and Deletion Policy – Establishes Adobe's retention and deletion practices for Personal Information. It outlines that Adobe should retain personal information for as long as there is a legitimate business or legal need to retain it for the purposes for which it was collected.

- Remote Access Standard – Defines the technical and behavioral requirements that must be met for accessing any Adobe information technology resources by remote means.
- Security Monitoring Standard – Details the security monitoring requirements necessary to ensure the continuous evaluation and improvement of the security posture of Adobe systems. Adobe depends on mission-critical IT systems and services to deliver exceptional experiences to customers and employees around the globe. Adobe protects against threats to the confidentiality, integrity, and availability of these systems by monitoring and evaluating systems security.
- Security Risk Management Standard – Defines the requirements regarding security risk management at Adobe. This document covers multiple aspects of risk management such as structure, identification, triage, measurement, treatment, tracking, monitoring, and assessment.
- Security Training Standard – Establishes the minimum governance requirements for Adobe's General Security Awareness Training and Security Engineering Training.
- Software Management Standard – Outlines the legal use of company-owned software and software installed on company assets, in alignment with the corporate Code of Business Conduct, and defines licensing requirements for software used on Adobe-owned or personal devices for work purposes.
- Standard for Processing Biometric Data – Outlines the requirements for Adobe to Process Biometric Information consistent with applicable law.
- Using Cookies or Other Technology to Access Data on a User's Device Standard – Describes the rules for collecting product usage data in Adobe products and services.
- Vendor Information Security Standard – This Standard defines the security requirements related to management of products and services procured from vendors.
- Vendor Privacy Assessment Standard – Describes employee-responsibility to engage the Privacy and Information Security teams to conduct a vendor assessment prior to the transfer of any Personal Information to a Vendor in accordance with applicable laws and internal policies.
- Vendor Risk Management Policy – Policy covers risk management practices for Adobe's global vendor base to mitigate risks that could disrupt operations, impact service quality, or cause regulatory non-compliance.
