1. Overview

Incident Response is an organized approach to handling information security, including privacy, events that impact Adobe data, systems and networks under our control and products ("Adobe DSNP"); it is a critical component of information security and privacy at Adobe. The purpose of this Information Security Incident Response Standard ("Standard") is to provide direction to Adobe Workers on their responsibility to notify the Adobe Cyber Defense Center ("ACDC") of any suspected security or privacy Incidents, as well as the method to do so. This Standard is governed by and a supplement to the Information Security Policy.

2. Scope

This Standard applies to all environments that collect, store, process, transmit, or dispose of data under Adobe partial or full control, as well as Adobe products. There may be requirements in this Standard that apply only to those environments that handle specific classifications of data, as described in the Data Classification and Handling Standard, for which Adobe has unique obligations (for example, cardholder data or electronic protected health information). If such additional requirements are applicable, they will be called out separately within this Standard.

Except as otherwise noted, this Standard applies to all Adobe Workers.

3. Statement

Adobe's Incident Response process must at a minimum prepare for, identify, contain, mitigate, recover, and follow up on suspected or known security Incidents. The following requirements detail what must be done to accomplish this in accordance with Adobe specific best practices and regulatory requirements.

3.1. Channels to Identify and Report within Adobe

3.1.1 If an Adobe Worker has knowledge that an Incident has occurred, or reasonably ***suspects*** that an Incident has occurred, they must immediately notify the Adobe Cyber Defense Center at:

- ACDC@adobe.com

3.1.2 If an Adobe Worker is notified by an external party who believes an Incident has occurred or reasonable suspects that an Incident has occurred, the Adobe Worker must send an email to the ACDC per the above. Do not include external parties (those that are not an Adobe Worker) in the email. You can also direct the external party to the below link for additional steps to take:

- Notifying Adobe of Security Issues

3.2. Response

Adobe's Security team maintains mechanisms and resources to respond to information security, data security, privacy and other non-physical incidents, in a manner that protects its own information and helps to protect the information of others that might be affected by the Incident:

3.2.1 Incidents that affect external stakeholders and require Adobe to communicate publicly will be communicated in accordance with the Public Communication Policy and the Incident Legal Determination and Communications Standard.

3.2.2 Adobe's Chief Security Officer and Chief Cyber Legal and Privacy Officer, or their delegates, must be notified by ACDC of an Incident involving Confidential or Restricted data (as defined by the Data Classification and Handling Standard).

3.2.3 In compliance with applicable legal requirements, customer or employee security and privacy related inquiries, complaints, and disputes must be reviewed by the appropriate team (such as the Security Incident Response Team, Privacy Office and Cyber Legal, or Business Unit [e.g., DX or DMe] or Functional Legal [e.g., Employment Law]) and acted upon in a timely manner.

3.2.4 Adobe must respond to externally and internally reported Incidents. If applicable, the Incident Response Team must coordinate the incident response activities, including engagement of required stakeholders, as defined by Incident Indicators detailed in the Incident Response Plan.

3.3. Incident Response Plan

3.3.1 The Incident Response Team must create, maintain, and where applicable, update an Incident Response Plan.

3.3.2 The Incident Response Plan must be reviewed and approved annually by management, including the Chief Security Officer and Chief Cyber Legal and Privacy Officer or their delegates.

3.3.3 The Incident Response Plan must contain the following attributes:

3.3.3.1 Describes the identification, classification, response, and resolution process of handling Incidents.

3.3.3.2 Contains provisions for management notification process of Incidents.

3.3.3.3 Includes provisions for maintaining contact information for internal and external parties.

3.3.3.4 Lessons learned from ongoing incident handling activities are incorporated into the IR plan.

3.3.3.5 Describes the structure and organization of the IR capability.

3.3.3.6 Provides a high-level approach for how the IR capability fits into the overall organization.

3.3.3.7 Meets the unique requirements of the organization, which relate to mission, size, structure, and functions.

3.3.3.8 Defines reportable Incidents.

3.3.3.9 Procedures to be followed throughout the lifecycle of an Incident.

3.3.4 The Incident Response Plan shall be made available to internal Adobe employees on a need to know only basis but will not be available to the general Adobe Worker population. Please contact the Incident Response Team at ACDC@adobe.com to request access to the Incident Response Plan or if you otherwise have a question about the IR Plan.

3.4. Training

3.4.1 ACDC will provide appropriate Incident Response Plan (IRP) training to all relevant stakeholders involved in the incident response process.

3.5. Testing

3.5.1 The Incident Response Plan and associated procedures, processes, playbooks, and wikis must be tested and documented by the Incident Response Team on at least an annual basis and the Plan updated, as needed, based on such test results.

NOTE: Testing may include validation during live Incidents, but may also include planned test exercises, as required.

3.6. Requirements Specific to FedRAMP Environments

The below requirements are applicable only to FedRAMP environments. FedRAMP environments must adhere to all other requirements in this Standard, including this section. See the FedRAMP Environment Protection Standard for details.

3.6.1 The FedRAMP Incident Response Plan must contain the following attributes:

3.6.1.1 Addresses potential insider threats.

3.6.1.2 Provides mechanisms for data correlation.

3.7. Requirements Specific to Breaches of Customer or Partner Protected Health Information

3.7.1 Additional requirements are applicable in cases when Incidents involve electronic Protected Health Information (ePHI) belonging to customers or partners (when Adobe is a Business Associate). These additional obligations are outlined in the Policy and Process for Handling Breaches of PHI ("Policy") as well as any supplemental terms relating to breach obligations that may be included in a negotiated BAA (standard Adobe BAAs mirror the steps in the Policy).

3.7.2 In some cases, Adobe may be required to notify customers of unsuccessful incidents involving ePHI. A BAA of an affected customer or partner should therefore always be checked when ePHI may have been involved to determine whether and what additional steps must be taken in accordance with customer and partner contracts.

4. Definitions

Term	Definitions
Adobe Worker	Personnel, including any regular employee, Adobe-paid temporary employee, or contingent worker (including agency temporary employees, independent contractors, and vendor employees), as well as interns of an Adobe Group Company.
Adobe Group Company	Adobe's consolidated subsidiaries, to the extent those subsidiaries are operationally integrated.
FedRAMP	FedRAMP stands for Federal Risk and Authorization Management Program. It is a government-wide program that helps the United States federal government use secure cloud services. It provides a standardized way to assess, authorize, and monitor the security of cloud services. See FedRAMP Environment Protection Standard
Incident	An unauthorized occurrence **(or a series of related unauthorized occurrences),** that jeopardizes the confidentiality, integrity, or availability of Adobe data, systems, networks, or products ("DSNP") or the increased risk of such compromise, therefore requiring the assessment of potential security, privacy or confidentiality risk for Adobe, its customers, Adobe Workers, or other individuals. An Incident may result in Adobe DSNP being lost, stolen, acquired, or accessed by an unauthorized party (i.e., internal, or external) or accessed or acquired by authorized parties who have no legitimate business need for such information, whether intentional or accidental. This includes Incidents with respects to Adobe DSNP held at home or at third parties.
Incident Response Plan	The Incident Response Plan define areas of responsibility within the Incident Response Team and establishes procedures and processes for handling security and privacy Incidents.

5. Responsibilities

Group	Responsibilities
Incident Response Team	The Incident Response Team is composed of the Incident Response participants for a confirmed Incident, and includes Incident Commander, Incident Responders, and Stakeholders. The Incident Response Team provides a timely, effective, and orderly response to computer-related or data-impacting security or privacy incidents in an organized, predictable, repeatable, and scalable manner.
Stakeholders	Stakeholders will be assigned as members of the Incident Response team, as coordinated by the Incident Commander, and designated by head of group below. Representative stakeholder groups include, but are not limited to: • Public Affairs • Communications • Privacy Office and Cyber Legal (POCL) • Business Unit or Functional Legal • Business / Product Leadership • Employee Experience Resources • Customer Care Experience • Product Engineering

Group	Responsibilities
	• Information Security • Information Technology

6. Governing Policy

Adherence to the governing Policy referenced below is required to be compliant with this Standard:

- Information Security Policy - The Information Security Policy outlines the strategic objectives, requirements, and goals to secure data, systems, and products under Adobe's control. The policy establishes the tenets of the Information Security Management System (ISMS) of Adobe and addresses the expectations that it has from all Adobe Workers.

7. References

- Data Classification and Handling Standard - The Data Classification and Handling Standard establishes that all data collected, processed, transmitted, stored, or destroyed by or on behalf of Adobe must be classified and then protected in accordance with its designated classification.
- Incident Legal Determination and Communications Standard - This Incident Legal Determination and Communication Standard describes the requirements that are designed to enable Adobe to meet its regulatory and contractual obligations related to data breach notifications.
- Public Communication Policy – This Policy describes the requirements designed to ensure that Adobe shows up consistently and accurately among our key public audiences and that inquiries are handled in a consistent, accurate and timely manner, and that material information is disclosed in a manner that is appropriate with Adobe's obligations as a public company.
- Vulnerability Management Standard - The Vulnerability Management Standard provides operational groups with the ability to detect and remediate potentially malicious vulnerabilities and proactively mitigate known risks.
- Incident Response Plan – An internal plan maintained by the Incident Response team and approved annually by the Chief Security Officer and Chief Cyber Legal and Privacy Officer or their delegates. It is shared with Adobe stakeholders on a need-to-know basis.
- Notifying Adobe of Security Issues – An Inside Adobe webpage that provides Adobe Workers with directions on reporting suspected Incidents to the Incident Response Team.

8. Document Properties

Coordinator	Ensures Review, Approval and Publication; Facilitates Discussions	Harrison Martorana, Technology Compliance Product Owner
Driver	Subject Matter Expert; Owner of Content; Works with Contributors	Joseph Davidson, Director, Cyber Defense Jeff Stanton, Sr. Manager, CSIRT Response
Approver	Approves Document	Nubiaa Shabaka, Chief Cybersecurity Legal and Privacy Officer Aaron Shanas,, Sr. Dir, Adobe Cyber Defense Center
Accountable	Ultimate Responsibility	Aaron Shanas,, Sr. Dir, Adobe Cyber Defense Center
Contributor	Provides Recommendations; Subject Matter Expert; Critical Reviewer	Click here for list of Contributors
Informed	Notified of Publications	Click here for list of Informed

9. Document History

Version	Approval Date	Changes	Approved By
10.0	March 2025	No Major Changes Minor Changes • Security Coordination Center (SCC) changed to Adobe Cyber Defense Center (ACDC) • Section 3.6 – Clarified section relevant to the FedRAMP Incident Response Plan • Removed sections related to 'Violations' and 'Exceptions' since it is duplicative content from the governing policy • In the Reference section, added descriptions of the Incident Response Plan and Notifying Adobe of Security Issues sections • Replaced Mike Mellor with Aaron Shanas as an approver	Nubiaa Shabaka, Chief Cybersecurity Legal and Privacy Officer Aaron Shanas , Sr. Director, Adobe Cyber Defense Center
