Driver: Aaron Anderson
Classification: Internal
Version: 7.0

Information Systems Operations Policy

1. Overview

The purpose of this policy is to state the strategic objectives of operational management of Adobe's information systems.

2. Scope

Except as otherwise noted, this Policy applies to all Adobe personnel, including any regular employee, Adobe-paid temporary employee, or contingent worker (including agency temporary employees, independent contractors, and vendor employees), as well as interns of an Adobe group company.

This Policy applies to environments that collect, store, process, transmit, or dispose of data. There may be requirements in this Policy that apply only to those environments that handle specific classifications of data, as described in the Data Classification and Handling Standard, for which Adobe has unique obligations (such as cardholder data or electronic protected health information). If such additional requirements are applicable, they will be called out separately within this document. Any environment handling such data must comply with all generally applicable requirements and any additional requirements specified for such data.

Where Adobe's responsibility and control over its information systems involves the use of third-party providers, including cloud providers (AWS, Azure), this Policy and related Standards also apply.

As necessary, Adobe may partition its information systems into components residing in separate logical domains and environments. The requirements in this Policy and related Standards are applicable to logical and physical environments.

3. Statement

3.1. Operations

3.1.1 All Adobe information systems, security teams and services must document and implement operating and management processes that assist in carrying out Adobe's business objectives.

3.1.2 Teams and services must define processes for configuring and maintaining network devices in their environment in accordance with the governed Standards under this Policy.

3.1.3 Operation of Adobe information systems will be conducted in such a way that risks are identified, reported, and mitigated in a timely and efficient manner. Risks are acted upon in accordance with legal, regulatory, and business requirements as outlined in the governed Standards under this Policy.

3.2. Data Handling

3.2.1 Communication between Adobe-owned or Adobe-managed systems shall implement appropriate security controls based on characteristics of the data, such as Restricted data (defined in Data Classification and Handling Standard).

3.3. Change Management

3.3.1 A change management process that includes the approval, testing, implementation, and documentation of changes must be developed, documented, and implemented effectively by teams and services to track and control the hardware, software, firmware, and other components that compose Adobe information systems.

3.3.2 The change management process must be consistent with the organization's information technology architecture plans. Formally documented change management roles, responsibilities, documentation, and necessary procedures shall be in place. For more information, please see Change Management Standard.

3.4. Standards

3.4.1 The governed Standards under this Policy must address the following:

- Securing the network
- Securely configuring systems
- Managing changes to environments
- Establishing security hardening standards
- Maintaining accurate documentation, such as but not limited to, diagrams of networks and detailed procedures
- Implementing and making available, where applicable, time protocol services
- Keeping systems up to date with relevant and best practice configurations
- Ensuring that unapproved devices are not connected to the network.
- Securing and properly configuring wireless networks
- Configuring end-point devices, such as employee assigned devices.
- Outlining requirements and technical enforcement, where possible, on employee-owned devices, also known as a Bring Your Own Device (BYOD).

3.5. Adobe Rights

3.5.1 To protect the sanctity of Adobe customer and proprietary data, Adobe reserves the right to retrieve, audit, access, and disclose any transaction or piece of data, sent through, or stored on the Adobe Corporate Network. Also refer to the Electronic Communications Policy.

4. Violations

Minor issues complying with this Policy are non-punitive and are part of Adobe's continual improvement. Minor non-compliance will be dealt with at the local team or service level.

Major violations that involve violation of laws, violation of written agreements, or willful disregard of the Policy may be subject to disciplinary action up to and including termination of employment or contract.

5. Exceptions

Exceptions to compliance with this Policy and the Standards thereunder are subject to approval by Adobe Security (and other applicable parties as Security determines) and are granted based on having both a legitimate business justification and having sufficient mitigating controls in place. Exceptions are only ever temporary and never permanent. [See the Information Security Risk Exception and Acceptance Procedure for additional details]. To request an exception for consideration, please go to the Technology Policies and Standards site and complete the exceptions request form.

6. Definitions

Term	Definitions
AWS	Amazon Web Services. A cloud services platform, offering compute power, database storage, content delivery and other functionality.
Azure	A Microsoft offering. A cloud services platform, offering compute power, database storage, content delivery and other functionality.
BYOD	Bring Your Own Device. See BYOD Standard.
Cardholder Data	See Cardholder Data Protection Standard here
Change Management	See Change Management Standard here
Restricted Data	See Data Classification and Handling Standard here

7. Responsibilities

Group	Responsibilities
Teams and Services	Adhere to the relevant directives of this Policy and the applicable requirements in the governed Standards
Management	Enforce and collaborate the application of the directives in this Policy

8. Governed Standards

The Standards referenced below are governed by this Policy and must also be met to be compliant with this Policy. These documents can be found here:

- Bring Your Own Device (BYOD) Standard: The BYOD Standard establishes Adobe's corporate requirements regarding the use of BYOD (Bring Your Own Device) and BYOD access to company resources. If a BYOD can connect to Adobe resources, the terms of this Standard will always apply, during or outside office hours and whether the Employee is situated at their normal place of work, another Adobe office, or elsewhere.
- Change Management Standard: The Change Management Standard outlines the minimum requirements to execute objectives such as responding to business requirements, reducing solution and service delivery defects and rework, ensuring all request specifications are complete, providing transparency and the level of effort required, improving solution availability, and increasing likelihood of change success and stability, ensuring Adobe is change-ready. Change Management is the authoritative process responsible for managing all changes to a new or existing system, software, or any system components on production environments.
- Cloud Efficiency Standard: The Cloud Efficiency Standard establishes processes designed to help Adobe maintain and manage its cloud efficiency goals in collaboration with the disciplines of governance, architecture, operations, and finance. Adobe is committed to managing its cloud costs by implementing and maintaining policies and procedures for the effective utilization of cloud resources and minimizing cloud waste while ensuring an optimal balance of performance and cost.
- Container and Orchestration Standard: The purpose of this Standard is to define the required security controls when using container technologies at Adobe. The standard covers generic security requirements that apply to all container usage. This standard is separated into four general use cases since there are multiple ways to utilize containers.
- Global non-PI Data Retention and Deletion Standard: The Global non-PI Data Retention and Deletion Standard defines requirements for retaining, managing, and securely deleting non-personal information across global technology and business environments.
- Hosting Standard: The Hosting Standard governs the hosting providers, locations, and names which may be used to deliver Adobe Services. The Standard is maintained with inputs from across the business and with specific consideration for regulatory requirements, taxation, vendor service availability, and our existing product infrastructure investments.
- Infrastructure Logging Standard: The Infrastructure Logging Standard defines the requirements for logging within Adobe infrastructure to ensure that information security policies, standards, procedures, and controls are being followed and are effective. Event collection is critical to meeting Adobe's operational and compliance requirements, including understanding the

nature of security incidents, access to systems and assets, and evaluating performance of Adobe's products and services. It is also used for establishing baselines, identifying operational trends, and supporting Adobe's internal investigations, including audit and forensic analysis.

- macOS Desktop Configuration Standard: The macOS Desktop Configuration Standard specifies the expected minimum requirements for macOS configuration at Adobe. The standard addresses configuration, implementation, and responsibility; applications, system properties and update management.
- Network Appliance Standard: The purpose of Network Appliance Standard is to outline the standards used in the management of all network appliances (for example, firewalls, routers, and switches) used within the Adobe environment.
- Network Time Protocol Standard: The Network Time Protocol Standard covers the minimum requirements for Adobe services with respect to a systems configuration of the network time protocol (NTP). Correct time synchronization for services is required for security, monitoring, incident response, transaction coherency, and forensic analysis. The intent of the guidelines in this standard is that all time synchronization ultimately terminates in an Adobe synchronization source or that of an Adobe-approved vendor.
- Product Lifecycle Standard: Adobe is committed to providing quality products and services to our customers. To this end, Adobe's Service Lifecycle (SLC) must meet the standard of due care that is reasonably expected by customers, shareholders, partners, Adobe workers, and the business itself within the product lifecycle. While each product and service may have a unique architecture and development process, this Standard provides the minimum baseline activities for managing software development.
- Public Cloud Operations Standard: The Public Cloud Operations Standard addresses the requirements of reducing the risk of flawed architecture that may lead to high profile incidents and events, providing a level of uniformity across all cloud platforms to assist in ensuring scalability and adaptability, and providing minimum requirements for operational readiness.
- Secure Device Standard: The Secure Device Standard specifies what is the minimum expected device security configuration required for all endpoint workstation devices (laptop/desktop) accessing Adobe data regardless of the operating systems and ownership.
- SharePoint and OneDrive Content Management Standard: The SharePoint and OneDrive Content Management Standard establishes Adobe's requirements for appropriate content management. Proper content management is at the heart of successful content collaboration. Keeping documents and web pages up to date is critical to great user experiences. Continuously updated content leads to relevant experiences for the individual and the organization, paving the way for a repository's benefits to be fully realized. In addition, data custodians for all site contents are clearly defined - leading to effective access control.
- System Architecture and Design Documentation Standard: Well-maintained architecture and design documents are a required component of Adobe's compliance program. The System Architecture and Design Documentation Standard outlines the minimum requirements for documenting system architecture and design for Adobe services and product solutions.
- Windows Desktop Configuration Standard: The Windows Desktop Configuration Standard covers configuration baseline details for the Windows operating system (OS) configuration on corporate owned Windows devices at Adobe. This Standard applies to all Windows OS configurations installed on Windows devices, but not to servers or mobile devices such as phones and tablets.
- Wireless Network Management Standard: The Wireless Network Management Standard outlines the Adobe requirements for the wireless network infrastructure, wireless services offered to Adobe employees and Adobe guests, and access to wireless services at Adobe.

9. References

- Data Classification and Handling Standard: The Data Classification and Handling Standard establishes that all data collected, processed, transmitted, stored, or destroyed by or on behalf of Adobe must be classified and then protected in accordance with its designated classification.
- Electronic Communications Policy: This policy describes the requirements for accessing, creating, using, storing, transmitting, or disclosing electronic information using any existing or future Adobe Communication Systems. This Policy also describes the circumstances under which Adobe may access or monitor Adobe Communication Systems for such information.

10. Document Properties

Coordinator	Ensures Review, Approval and Publication; Facilitates Discussions	Zenitha Das
Driver	Subject Matter Expert; Owner of Content; Works with Contributors	Aaron Anderson
Approver	Approves Document; Ultimately Responsible for Execution	John Mockett
Contributor	Provides Recommendations; Subject Matter Expert; Critical Reviewer	Click here for Contributor list

Informed	Notified of Publications	Click here for Informed list

11. Document History

Version	Approval Date	Changes	Approved By
1.0	11/20/2015	N/A	Brad Arkin
1.1	October 2016	**Minor Changes** • Slight wording updates that did not change the intent but added clarity • Added last three bullet points to section 3 • Added last paragraph to section 3	Dan Cutler, Director of TechOps Infrastructure Service Atul Gupta, Director of Hosting & Cloud Platform Services
2.0	November 2017	**Minor Changes** • Added second and third paragraph to scope • All content is new except section 3.5 • All other content has been revised or added to more appropriately represent not just security but all information system operations.	Cheryl House, VP, Chief Compliance Officer Dan Cutler, Director of TechOps Infrastructure Service Atul Gupta, Director of Hosting & Cloud Platform Services John Mockett, Sr Manager, Device Management and Engineering Services Khaleel Rehman, Director, Network & Telephony Infrastructure Engineering
3.0	July 2020	No Changes	Cheryl House, VP, Chief Compliance Officer Dan Cutler, Director of TechOps Infrastructure Service John Mockett, Sr Manager, Device Management and Engineering Services
4.0	December 2020	No Changes	Cheryl House, VP, Chief Compliance Officer Dan Cutler, Director, Cloud Platform Team, Digital Experience John Mockett, Sr Manager, Device Management and Engineering Services Matt
5.0	December 2021	**No Major Changes** **Minor Changes** • Replaced Dan Cutler with Matt McBride as approver	Cheryl House, VP, Chief Compliance Officer John Mockett, Sr Manager, Device Management and Engineering Services Matt McBride, Director of Infrastructure Services

Version	Approval Date	Changes	Approved By
6.0	March 2023	**No Major Changes** **Minor Changes** • Approver - Replaced Matt McBride with Aaron Anderson • Driver – Replaced Chetan Uttarkar with Aaron Anderson	Cheryl House, VP, Chief Compliance Officer John Mockett, Director, Employee Technology & Support Aaron Anderson, Sr. Director, Infrastructure Engineering
7.0	May 2024	**No Major Changes** **Minor Changes** • Section 8. Governed Standards – added all the other documents governed by the policy along with their descriptions • Section 9. References – added document descriptions to the References section • Removed Cheryl House and Aaron Anderson from role of Approver • Harrison replaced by Zenitha as coordinator	John Mockett, Director, Employee Technology & Support
