Information Systems Asset Management Policy

1. Overview

This Policy outlines the high-level objectives for the management of information systems assets (see definition below).

2. Scope

Except as otherwise noted, this Policy applies to all Adobe personnel, including any regular employee, Adobe-paid temporary employee, or contingent worker (including agency temporary employees, independent contractors, and vendor employees), as well as interns of an Adobe group company.

This Standard is in reference to laptop, desktop, mobile (smartphone or tablet), or server hardware issued to Adobe workers; hereafter referred to as 'Adobe assets'. Additionally, this Standard applies to Adobe workers who are provided Adobe assets; hereafter referred to as 'Asset Custodian'.

This Policy applies to environments that collect, store, process, transmit, or dispose of data. There may be requirements in this Policy that apply only to those environments that handle specific classifications of data, as described in the Data Classification and Handling Standard, for which Adobe has unique obligations (for example, cardholder data or electronic protected health information). If such additional requirements are applicable, they will be called out separately within this document. Any environment handling such data must comply with all generally applicable requirements and any additional requirements specified for such data.

This Policy is not applicable to devices that are not owned by Adobe, for example devices brought in by employees or vendors over which Adobe has no control. Please refer to the Bring Your Own Device (BYOD) Standard.

3. Statement

3.1. Asset Custodianship and Responsibility

3.1.1 Information System Assets must have a documented custodian and must be tracked and disposed of in accordance with the requirements published in supporting Standards (see Section 8). The Information System Asset Custodians are responsible for carrying out these responsibilities.

3.1.2 All Information System Assets accessing Adobe data must be authorized, inventoried, and secured by the Information System Asset Custodian. The Information System Asset Custodian must ensure the appropriate usage of assets and prevent unauthorized access.

3.1.3 Whether the physical security is handled by the custodian or a data center, custodians are responsible for the physical security of assets. For example, custodians are responsible for their assets being in approved data centers where a dedicated Adobe team will protect the physical security of the asset.

3.1.4 Information Systems Assets must have a defined lifecycle and process for that lifecycle - acquisition to disposal. For example, employee-assigned Information System Assets must be returned to Adobe IT at the end of useful life, or upon an employee's termination.

3.2. Supporting Requirements

Supporting Standards for this Policy (see Section 8) must address the following:

- Asset tracking
- Asset inventory
- Transportation of assets
- Asset custodianship
- Lost or stolen assets
- Acceptable use of assets
- Software licensing and usage
- Unapproved software
- Asset disposal
- Mobile device usage

4. Violations

Minor issues complying with this Policy are non-punitive and are part of Adobe's continual improvement. Minor non-compliance will be dealt with at the local team or service level.

Major violations that involve violation of laws, violation of written agreements, or willful disregard of the Policy may be subject to disciplinary action up to and including termination of employment or contract.

5. Exceptions

Exceptions are subject to approval and are granted based on having both a legitimate business justification and having sufficient mitigating controls in place. Exceptions are only ever temporary and never permanent. To request an exception for consideration, please go to the Technology Policies and Standards site and complete the exceptions request form.

6. Definitions

Term	Definitions
Information System Asset	Physical, virtual, and software assets that are procured with Adobe funds or have an Adobe Asset tag affixed to a device. Examples include laptops, desktops, mobile devices, servers, and network devices.
Information System Asset Custodian	The Adobe Personnel that have been identified as being responsible for the security, custody, usage, and decommissioning of an Information System Asset.

7. Responsibilities

Group	Responsibilities
Adobe Personnel	Understand the requirements of this Policy and follow the supporting standards and procedures.
Supervisors	• Communicate the requirements of this Policy as necessary. • Monitor compliance and ensure that direct reports follow the Standards and Procedures that pertain to this Policy.
Lifecycle Management	• Update the Standards and Procedures that pertain to this Policy as necessary. • Assist and guide Adobe Personnel in complying with this Policy.

Group	Responsibilities
	• Determine control measures and provide written guidance documenting such measures.
Compliance Office	Review and approve this Policy.

8. Governed Standards

The following referenced Standards are governed by this Policy and must also be met to be compliant with this Policy:

- Cloud Resource Tagging Standard
- eWaste Disposal Standard
- Employee-Assigned Asset Standard
- Information Systems Asset Inventory Standard
- Information Systems Asset Transportation Standard
- Mobile Device Usage Standard
- Software Management Standard
